

GIUSEPPE POLIANDRI

Junior Full Stack Developer · Systems Engineering Student

Punto Fijo, Falcón, Venezuela (open to remote) · +58 424 603 1027 · giuseppepoliandri07@gmail.com · github.com/GiuDPC · linkedin.com/in/giuseppepoliandri · giudpc.vercel.app

PROFESSIONAL SUMMARY

Junior Full Stack Developer and Systems Engineering student focused on building complete, end-to-end products: database modeling, REST APIs, web interfaces, and mobile apps. I've designed and shipped six-plus full-stack side projects on my own — including an SLA-tracking maintenance ticketing system for a shopping mall and a logistics platform built on hexagonal architecture with real-time tracking — applying solid practices in automated testing, CI/CD, and scalable architecture. Looking for a Junior/Trainee role where I can bring autonomy, fast learning, and production-ready code.

TECHNICAL SKILLS

- Languages:** JavaScript, TypeScript, PHP, C++
- Backend:** Node.js (Express, NestJS), Prisma ORM, REST APIs, WebSockets (Socket.IO), JWT / Passport, Zod
- Databases:** PostgreSQL, MongoDB, Supabase
- Frontend:** React (Hooks, SPA), TypeScript, Tailwind CSS, Vite, Framer Motion, GSAP
- Mobile:** React Native, Expo, Zustand
- DevOps & Testing:** Docker, Docker Compose, GitHub Actions (CI/CD), Vitest, Turborepo (monorepos)
- Other:** Hexagonal / Clean Architecture, Git, Firebase, Google Cloud APIs

FEATURED PROJECTS

Sentinel Core — Maintenance Ticketing System with SLA Tracking | *React, TypeScript, Express, Prisma, PostgreSQL, Zod, Vitest*

- Designed and built a full-stack platform to centralize reporting, assignment, and resolution of maintenance issues for a shopping mall, with automatic SLA deadline calculation by priority.
- Implemented three role-based dashboards (Admin, Technician, Requester) with smart technician assignment based on workload and full action-audit logging.
- Covered the project with 60+ automated tests (frontend and backend with Vitest) and documented the API with Swagger; deployed to production (Vercel + Render).

Code: github.com/GiuDPC/sentinel-core · Demo: sentinel-core.vercel.app

OmniLogistics Core — Real-Time Logistics Platform | *NestJS, React Native/Expo, PostgreSQL, MongoDB, Redis, Socket.IO*

- Built a Turborepo monorepo with an API, mobile app, and admin dashboard, applying hexagonal architecture (domain / application / infrastructure) on top of NestJS.
- Implemented real-time driver tracking over WebSockets, a wallet system with double-entry bookkeeping, and background job queues (BullMQ) for notifications.
- Integrated AI-assisted complaint analysis (Gemini) and multi-role authentication (passenger, driver, admin) with Passport JWT.

Code: github.com/GiuDPC/omnilogistics-core

BrincaPark — Reservation Management System | *Node.js, Express, MongoDB Atlas, TypeScript, Vitest, GitHub Actions*

- Developed an end-to-end business management system with schedule automation, capacity control, and a real-time analytics dashboard.
- Set up a CI/CD pipeline with automated testing, cutting production error rates by 30%.

Code: github.com/GiuDPC/brincapark-reservation-system

TasaVerde — Exchange Rate Monitoring App | *React Native, TypeScript, Expo*

- Built a cross-platform mobile app to compare exchange rates (BCV vs. Binance) in real time, with multi-currency conversion and personalized push alerts.
- Optimized mobile data usage through caching strategies and efficient global state management.

Code: github.com/GiuDPC/TasaVerde-app

Graph Core — Graph Visualization Engine | *C++17, OpenGL, GLFW, ImGui*

- Real-time graph visualization and network simulation engine with low-level graphics rendering (OpenGL), outside the usual web stack.

Code: github.com/GiuDPC/graph-core

EDUCATION

B.S. in Systems Engineering — Universidad Nacional Experimental Politécnica de la Fuerza Armada (UNEFA), Falcón

In progress · Punto Fijo, Venezuela

Academic focus: microservices architecture, data structures, and secure software development.
